

As flocculant, dispersant, friction reducer, fluid loss additive

Characteristics:

1. Improve the quality of the paper and improve the pulp performance of dewatering,
2. Raise retention of fiber fines and filler,
3. Reduce the consumption of raw materials as well as the pollution to the environment;
4. Improve the strength of the paper;
5. Maintain the paper gloss to avoid moldy.

The effect of use in papermaking depends on its average molecular weight, ion nature, ion charge density and the activity of other copolymers.
